The E-Waste Problem

-Small electronics — chargers, cables, earphones, keyboards, mice, batteries — are everywhere on campus and in offices. Most end up in regular trash or shoved into drawers, not recycled.

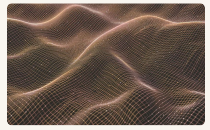

Convenience gap

No easy, visible drop-off points where people already are.

Hidden hoard

Electronic clutter accumulates at homes and dorms — low urgency to recycle.

Environmental cost

Improper disposal contaminates soil and water; valuable materials are lost.

Key message: E-waste is generated everywhere, but convenient and rewarding disposal is still missing.

Made with GAMMA

Introducing E-Waste Mining Pods

Recycle your e-waste. Earn useful rewards.

Smart identification

AI and sensors classify items (batteries, cables, small gadgets) and grade material value.

Digital credits

Users receive E-Waste Credits instantly in an app or student account.

Redeem rewards

Credits redeemable for printing, photocopying, scanning, and stationery on campus.

Responsible processing

Pods segregate items and route materials to authorized recyclers or refurbishers.

Impact dashboard

Institutions get a live dashboard: items collected, materials recovered, and credits redeemed.

Made with GAMMA

How We Make Money

Simple projection (conservative):

- 10 Institutions × ₹10,000 / month = ₹1,00,000 / month
- Estimated Annual Subscription Revenue = ₹12 Lakhs

Material recovery, sponsorships, and refurbishment add incremental revenue beyond subscriptions.

Institution Subscription

Monthly plan for maintenance, analytics, and credits provisioning. ₹5,000–₹15,000 / institution / month.

Material Recovery

Revenue from reclaimed metals, plastics and PCB components sold to authorized processors.

Corporate Partnerships

Sponsored pods and ESG programs with brands and NGOs supporting sustainability goals.

Refurbishment & Resale

Functional devices refurbished and resold through campus marketplaces or partners.

Made with GAMMA

From Prototype to Network

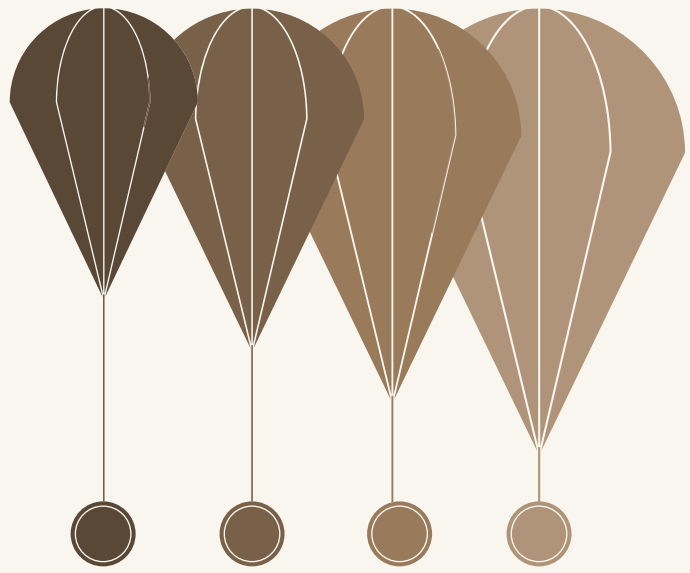

Build a network of smart e-waste collection pods across colleges and offices — turning discarded electronics into environmental impact and practical rewards.

Month 1
Research & Planning

Months 2-3
Prototype Development

Months 4-5
Pilot Testing

Months 6-12
College then Office Expansion

Vision

Closing: Turn every discarded electronic item into environmental impact + useful rewards.

Month 1: Research & Planning

Partner scouting, recycling compliance, and rewards integration planning.

Months 2–3: Prototype

Hardware build, AI model training, and app integration.

Months 4–5: Pilot

Deploy in 2–3 campuses, iterate UX, validate credits & reward flow.

Months 6–8: College Expansion

Scale to multiple institutions, onboard partners, and refine logistics.

Months 9–12: Office Expansion

Target corporate campuses and sustainability programs for larger deployments.
